2. FURTH	IER ACTION			
If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered.				
If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.				
For further options, see Form PCT/ISA/220.

2 Document D1, which is considered as representing the most relevant prior art, describes (cf. D1, figure 2):

A method of adhesive-coating at least one microstructured substrate having coplanar upper plane regions and recesses between the latter, by means of an adhesive capable of adhering to these

coplanar upper plane regions, this method comprising the following steps:

- a grid is placed on top of the substrate;
- this grid is coated with adhesive, by means of a tool which, by pressing on the grid, brings this grid locally into contact with the coplanar upper plane regions, so as to deposit a film of adhesive droplets on these coplanar upper plane regions; and the grid is removed,

from which the subject matter of independent claim 1 differs in that:

in the method, the coplanar upper plane regions are treated before the film of adhesive droplets is deposited thereon, this treatment being designed to adapt the wettability of these regions to the adhesive.

2.1 The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

The problem that the present invention is intended to solve can thus be considered to be how to ensure that the droplets join up so as to form a coherent film (cf. page 11 of the description of the present application, lines 12-17).

2.2 The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)), for the following reasons:

none of the documents identified in the art or mentioned in the search report discloses a treatment for adapting the wettability of the coplanar upper
